

InvestIQ - Example Runs

Real output from the deployed InvestIQ agent (Groq / Llama 3.3 70B), captured during live testing - not hand-written or mocked. Each run took roughly 8-12 seconds end-to-end across all 8 LangGraph nodes.

The landing page hero, with the animated gold/purple/coral headline and live stats.

Live "AI Thinking" Loading Experience

Captured mid-run on a real NVIDIA query - the pulsing gradient orb and step tracker update live as each LangGraph node completes.

Investment Verdict Card (real NVIDIA run)

Investment Score 84, Confidence 89 - real Groq output, not mocked.

SWOT Analysis Grid (real NVIDIA run)

Strengths / Weaknesses / Opportunities / Threats, generated from the same run.

Example Report - Apple

Recommendation: Invest - Investment Score 85 | Confidence 90 | Risk 60 | Growth 80

Overview

Apple Inc. (founded 1976, Cupertino, CA, CEO Tim Cook) - Technology / Consumer Electronics. Designs, manufactures, and markets consumer electronics, software, and online services (iPhone, Mac, iPad, Apple Watch, AirPods) with a tightly integrated hardware/software ecosystem.

Business Model

Revenue primarily from hardware sales, plus a fast-growing services segment (Apple Music, Apple TV+, iCloud) and App Store commissions. Ecosystem lock-in and premium pricing drive high margins.

Financials

Revenue growing ~10-15% YoY, net margin ~20-25%. Growth driven by the expanding services segment, wearables, and emerging-market penetration.

Risk (60/100)

Regulatory scrutiny/antitrust risk, competitive pressure from Samsung/Huawei/Google, high R&D spend, global supply chain exposure.

SWOT

Strengths Brand loyalty & premium pricing, diversified hardware/software portfolio, large loyal customer base.	Weaknesses iPhone revenue concentration, high R&D spend, limited penetration in some emerging markets.
Opportunities Wearables/accessories growth, expanding services segment, emerging-market penetration (China, India).	Threats Antitrust/regulatory scrutiny, competition from Samsung/Huawei/Google/Amazon, macroeconomic downturn risk.

Reasoning

Strong brand loyalty, a diversified and growing product/services portfolio, and consistent double-digit revenue growth outweigh regulatory and competitive risk - hence an Invest call with high (90/100) confidence.

Example Report - Tesla

Recommendation: Invest - Investment Score 80 | Confidence 85 | Risk 60 | Growth 90

Overview

Tesla, Inc. (founded 2003, Austin, TX, CEO Elon Musk) - Technology / Electric Vehicles and Clean Energy. Designs, manufactures, and sells EVs, solar power systems, and energy storage products.

Business Model

~90% of revenue from vehicle sales (Model S/3/X/Y); remaining from energy storage (Powerwall/Powerpack), regulatory credit sales, Supercharger network, and subscription/software services (recurring revenue).

Financials

Revenue growing ~20% YoY, consecutive profitable quarters (~\$1.1B net income in the modeled quarter). Growth driven by Model 3/Y demand, international expansion, and autonomous-driving investment.

Risk (60/100)

Regulatory dependency on EV incentives, intensifying competition (GM, Volkswagen, Nissan, Rivian, Lucid), high capex/R&D, supply chain disruption risk, macroeconomic/trade-policy exposure.

SWOT

Strengths EV market leadership, software-centric approach, brand loyalty and scale economics.	Weaknesses High R&D/capex, dependence on government EV incentives, supply chain fragility.
Opportunities Growing EV/energy-storage demand, international expansion, autonomous-driving technology.	Threats EV incentive/regulatory changes, new entrants and established automakers, macroeconomic uncertainty.

Reasoning

Market leadership, a software-centric moat, and ~20% YoY revenue growth support an Invest call, tempered to 85/100 confidence by high R&D spend and regulatory dependency on EV incentives.
